RECKLI surface protection OS Intensive (hydrophobic agent)

Liquid hydrophobic treatment based on highly crosslinked acrylate polymers. Properly apply surface protection to an absorbent mineral base. UV-resistant and salt-resistant treatment reduces the penetration of acidic substances from the air.

Substrate:
Concrete / mineral plaster / brick / sandstone / sandy limestone / concrete plaster
Absorbent substrate

Surface:
Glossy, color-boosting

Number of coats:
One application

Execution:
Clean substrate and remove any separator residue, correctly apply RECKLI OS Intensive surface protection treatment and protect the surface from soiling and the weather as the product dries.
Usage: approx. 60-140 m² depending on the substrate's absorbency.

Work should be carried out in accordance with the "RECKLI® OS Intensive technical fact sheet".
