

### **RECKLI surface protection OS Intensiv (hydrophobic agent)**

Liquid hydrophobic treatment based on highly crosslinked acrylate polymers. Properly apply surface protection to an absorbent mineral base. UV-resistant and salt-resistant treatment reduces the penetration of acidic substances from the air.

Substrate:

Concrete / mineral plaster / brick / sandstone / sandy limestone / concrete plaster  
Absorbent substrate

Surface:

Glossy, color-boosting

Number of coats:

One application

Execution:

Clean substrate and remove any separator residue, correctly apply RECKLI OS Intensiv surface protection treatment and protect the surface from soiling and the weather as the product dries.

Usage: approx. 60-140 m<sup>2</sup> depending on the substrate's absorbency.

Work should be carried out in accordance with the "RECKLI OS Intensiv technical fact sheet".
