

### **RECKLI surface retarder (negative process)**

Texture the concrete element using a solvent-based concrete surface retarder.

Surface retarder:

RECKLI-CR type N (wash depth approx. x.x mm, see surface retarder application)

Aggregate size:

x-x mm (depending on the choice of surface retarder and wash depth, see surface retarder application)

Execution:

Apply RECKLI surface retarder onto the casing in accordance with manufacturer specifications, pour concrete then rinse off.

Work should be carried out in compliance with the "RECKLI surface retarder manual".

*Recommendation:*

*Once the concrete has dried out protected from the weather, it should be coated with a hydrophobic and oleophobic treatment.*

*Brand: Reckli*

Exposed concrete should be protected from damage and weather using fiberboard and PE films after production.
