Build on the future

Architecture in flux: form follows flow. That means: Architecture that transforms, changes, develops. Architecture that is in harmony with nature, while seeking new paths and moving with the times.

Buzzword: sustainability. Often quoted, happily quoted – and yet more significant than ever. With regard to the building material concrete, demanding and challenging. Where is the construction industry going? What needs to change? What innovative solutions are there?

This issue traces a more sustainable architecture. Shows new possibilities. New formliners. New designs. Let yourself be inspired. And follow the flow.

Lower.
Lighter.
Less material.

- Our new formliners in the FORM FOLLOWS FLOW Collection are a more environmentally friendly alternative when it comes to bringing design to facades. The structure depth is only 2–3mm. For comparison: The material input is on average only half of our classic formliners. The advantage: lower consumption of polyurethane and concrete. And more sustainability.
- More possibilities thanks to custom designs. Just like with our UNIQUE series, almost any desired pattern can be implemented.
- Due to the lower structure depth, our new formliners can be used indefinitely. Additional benefits: less material and less weight for simplified handling and lower transport efforts.

FLURRY

Bringing order to the floral chaos – our “Flurry” textured formliner is a homogeneous pattern that connects uneven flowers in a symmetrical way.

Irregular, rugged, sometimes large, sometimes small – our “Torn” texture looks like countless, closely packed miniature continents. This gives the facade an exciting look.

TORN

RECKLI Collection → Torn

Custom designs are also possible for our thin formliners

G R O O V E

Wild, organic shapes – you have to look twice at our “Groove” design. Only then will you notice that the leaves are formed from the irregular, criss-crossing lines.

H E D G E

Everything flows – our new “Hedge” texture almost meanders through the concrete. And its design is reminiscent of ferns swaying in the wind. But at a distance, the design can also appear abstract.

RECKLI Collection → Hedge

Build on the future

The RECKLI Sustainability Commitment

Concrete, sand, wood – the construction industry requires many resources. And large amounts of them. This in turn affects us and our environment. Often rather. We are also part of this industry. And we are responsible for making our products as climate-friendly as possible. That isn't always easy. We are constantly working to optimize our products and processes. We reduce their CO₂ emissions. We are researching recycling options for plastics. We make our packaging more sustainable. In order to make our contribution – for an architecture in flow with the times.

Certification pending

Our goal for 2023 is ISCC+ certification. That means: All of our formliners can shortly also be ordered in a more sustainable, certified version. ISCC is a global sustainability certification system covering all raw materials and markets.
