RECKLI surface protection OS W (hydrophobic agent)

Apply liquid polymer-based hydrophobic agent as surface protection to an absorbent mineral base. Treatment UV-resistant and steam-permeable.

Substrate:
Concrete / mineral plaster / brick / sandstone / sandy limestone / concrete plaster

Surface:
silk matt

Execution:
Clean substrate and remove any separator residue, correctly apply RECKLI OS W surface protection treatment and protect the surface from soiling and the weather as the product dries.
Usage: approx. 80-100 m^2 depending on the substrate's absorbency.

Work should be carried out in accordance with the "RECKLI OS W technical fact sheet".
