

HONEY BEES

On its own, the hexagon has an angular and repellent appearance, but closely interwoven it takes on soft, flowery shapes.

RECKLI artico® neo is a plastic foil on which graphics or photos are printed with a high-quality concrete activator. The concrete activator causes the concrete to set at a different time so that it can be washed out on the surface after demolding. The uppermost cement skin is partially removed. The contrast between the washed out and smooth surfaces makes the graphics or photos visible. The foils are intended for single use.

Height of the element 37,6 cm

Width of the element 8,55 cm
