

RECKLI Graffix Basic graffiti protection

Apply liquid hydrophobic and oleophobic anti-graffiti treatment with fluorine components to an absorbent mineral base. UV-stable, breathable and steam-permeable treatment.

Substrate:

Concrete / mineral plaster / brick / sandstone / sandy limestone / concrete plaster
Absorbent substrate

Surface:

Glossy, color-boosting

Number of coats:

Two coats (wet on damp)

Execution:

Clean substrate and remove any separator residue, correctly apply undiluted RECKLI Graffix Base graffiti protection and protect the surface from soiling and the weather as the product dries.

Usage: approx. 100-200 m² depending on the substrate's absorbency.

Work should be carried out in accordance with the "RECKLI® Graffix Basic technical fact sheet".
