

RECKLI surface protection OS HO (oleophobic and hydrophobic agent)

Apply liquid hydrophobic and oleophobic agent as surface protection to an absorbent mineral base.
Treatment UV-resistant and steam-permeable.

Substrate:

Concrete / mineral plaster / brick / sandstone / sandy limestone / concrete plaster

Surface:

Matt, color-boosting

Execution:

Clean substrate and remove any separator residue, correctly apply RECKLI OS HO surface protection treatment and protect the surface from soiling and the weather as the product dries.

Usage: approx. 100-300 m² depending on the substrate's absorbency.

Work should be carried out in accordance with the "RECKLI® OS HO technical fact sheet".
